

Workshop on Intellectual Property Rights, R&D and Innovation In University System

Intellectual property (or "IP") is a category of property that includes intangible creations of the human intellect, and primarily encompasses copyrights, patents, and trademarks. It also includes other types of rights, such as trade secrets, publicity rights, moral rights, and rights against unfair competition. The main purpose of intellectual property law is to encourage the creation of a wide variety of intellectual goods. To achieve this, the law gives people and businesses property rights to the information and intellectual goods they create, usually for a limited period of time. Because they can then profit from them and this also gives economic incentive for their creation.

Objectives

- To create public awareness about the benefits of Intellectual property among all sections of society.
- To modernize and strengthen IP administration.
- To provide protection for researchers' research work
- To catalyze commercialization of IP rights.
- Capacity development by strengthening and expanding human resources, institutions for training, research and skill building in IP

17th March 2018
