Organised By
**School of Geography,
G.M. University,**
Amruta Vihar, Sambalpur.

ABOUT THE WORKSHOP

Geographic information system (GIS) technology has predominantly changed how our world is analyzed and modeled. GIS provides an easy and more efficient way to interpret geospatial data to create a topographic map with elevation, angles, and other features. This workshop exposes the participants to the concepts and applications of GIS in use for multiple disciplines. Participants will learn to create, edit, visualize and analyze geospatial information and apply this learning to work on a vast range of projects where GIS and GPS technology is used.

OBJECTIVES OF THE WORKSHOP

1. To train the participants to create, use and share maps of different projections.
2. To acquaint them with the process for presenting spatial information.
3. To give each and every participant a practical experience of application of QGIS and GPS technique.

COURSE CONTENT

- Defining GIS and GPS
- Use GIS to identify, explore, understand and solve spatial problems
- Demonstrate GIS modeling skills
- Design and implement a GIS project
- Demonstrate competency with the QGIS software to enhance and interpret data
- Formulate application of GIS technology
- Use of GPS
