Abstract

The rapidly increasing incidence of diabetes mellitus as a chronic disease is becoming a serious threat to mankind health in all parts of the world. However, the currently available therapies are not of much use in prevention or reduction of disease. There are a large number of plants and natural biomolecules that have been discussed in the literature for their antidiabetic effects. Recently, the screening of many types of plant derived alpha-amylase, alpha-glucosidase inhibitors and other compounds that reduce the glucose level in the body and have fewer side effects has been successfully isolated. In this chapter, the mechanism of diabetes mellitus has been discussed. Also, the plants having anti-diabetic property along with its constituents has been presented summarized with the available literature resource. In addition to this, the common strategy that is followed for inhibition assay for an anti-diabetic compound has been discussed. Finally, future opportunities and challenges in this research area are proposed.

Introduction

Diabetes mellitus commonly known as diabetes, is a metabolic disorder characterized by enhanced blood glucose level due to inadequate amount of insulin hormone secretion from the pancreatic gland (Owolabi et al., 2014). The rapid increase in the numbers of diabetes patients throughout the globe is a great concern in recent times. As per a recent report, about 177 million of the global population live with diabetes and this figure is more likely to increase by 2030 (World Health Organization, 2009; Mendy et al., 2016). Considering the severity of the disease, the diabetes mellitus is considered as

9 Artificial Neural Network (ANN) Techniques in Solving the Protein Folding Problem

9.1 INTRODUCTION

All functional proteins adopt a unique compact three-dimensional (3D) conformation from their unfolded amino acid sequences. Protein folding is a phenomena by which the proteins assembles itself into their correct native structure by orientaing and arranging the amino acids relative to each other.. (Figure 9.1). There are problems associated with the folding process, such as how the folding occurs, what the pathways are, what imparts overall stability after folding is over, and overall the basic rules for the protein folding, etc. So all these queries are known as the *protein-folding problem* [1–2].

The historical work regarding protein folding started with the famous experiment by Anfinsen in the year 1961on the enzyme ribonuclease A. As per Anfinsen’s observation, the ribonuclease enzyme can fold spontaneously into its native stable

COVID-19: An Updated Insight of the Pandemic

Raghunath Satpathy and Prangya Ranjan Rout

Abstract

Novel coronavirus (SARS-CoV-2) out-broke in the city of Wuhan in China and widely spread across the globe in a pandemic manner, causing societal and economic disruptions. Though the origin of the novel virus is still a debating topic, it is certain that SARS-CoV-2 acquired human to human transmission capacity. Regardless of aggressive containment and quarantine approaches, the number of confirmed cases continues to rise and being reported due to its highly infectious nature. As of the time, there is a little scope for the antiviral drugs or vaccines for the treatment of coronavirus infection; due to the vigorous mutation rate in the viral genome. However, existing anti-parasite drugs like ivermectin and chloroquine could effectively inhibit the virus has been reported. Few of the vaccines have come up with certain degree of efficacy and many are under the clinical trial phase. The research on novel coronavirus is still in the preliminary stage. In this chapter, we systematically summarize the origin, transmission route, molecular characterization, pathogenic mechanism, contagious nature, clinical symptoms, diagnosis, treatment, mutation and infection as well as prevention strategy of coronavirus disease based on the recently available literature. In addition to this, this chapter presents updated insights of the current state of knowledge pertaining to novel coronavirus and can be referred for potential future studies.

Keywords: Novel coronavirus (SARS-CoV-2), coronavirus disease, prevention strategy, transmission capacity, drug targets, treatment methods, virus structure, mutation

1. Introduction

In December 2019, Wuhan city in China became the center of origin of the novel coronavirus disease with the acronym COVID-19 outbreak that continues to spread quickly across the globe in a very short time. Due to its severe infection rate, on January 30, 2020, World Health Organization (WHO) declared COVID-19 as the public health emergency of international concern (PHEIC), followed by a worldwide pandemic declaration on March 11, 2020. As of May 5, 2020, it has spread to 220 countries with 3665403 confirmed covid-19 positive cases. The recent data (as of June 28, 2021) show that the number of countries affected by Covid-19 is 229, with a total of 181,741,361 confirmed cases of COVID-19 and 3,936,510 deaths. It is anticipated that the full extent of spreading and severity of this 2019 novel coronavirus is yet to be seen and global control of COVID-19 will be one of the toughest challenges humanity has ever faced [1, 2]. According to the international committee on taxonomy of viruses (ICTV) classification

Application of Dehalogenase Enzymes in Bioremediation of Halogenated Pollutants: A Short Review

Raghunath Satpathy

 <https://orcid.org/0000-0001-5296-8492>

Gangadhar Meher University, Samabalpur, India

ABSTRACT

The halogenated hydrocarbons have been widely used by human beings. They are xenobiotic and toxic. The microbes having a specific group of hydrolase enzymes, known as dehalogenases, that actually break the carbon-halogen bonds of the halogenated substances and subsequently convert them into their non-toxic forms. In this chapter, the categories of dehalogenase enzymes possessed by microorganisms are narrated. The overall source, mechanism of catalysis, and structural aspects of the haloalkane dehalogenase enzymes have been discussed with special focus to the bioremediation of 1, 2 dichloroethane.

INTRODUCTION

The halogenated compounds (both aliphatic and aromatic) are xenobiotic in nature and are being used widely from many years. Therefore, the progressive accumulation of these substances in the environment created a global threat to human health in recent times (Atashgahi et al., 2018; Zhu et al., 2017). The substances like dichlorodiphenyltrichloroethane (DDT), polychlorinated biphenyl (PCB), dioxins harm human health as they have been reported to be persistent (Besis & Samara, 2012; Chaudhry & Chapalamadugu, 1991; Fetzner, 2002). A basic step in the bio-degradation of organohalides is the cleavage of the carbon-halogen bond known as *dehalogenation* that is shown by a diverse group of microorganisms as described by many researchers. There are some key hydrolase group of enzymes from different microbial sources which are responsible for dehalogenation of these substances by catalysing the cleavage of carbon-halogen bonds of these molecules (Janssen, 2004; Satpathy, 2019; Satpathy et

Manusmṛti : A Dharmasāstrika discourse of Society

Dr. Sushree Sasmita Pati*

Introduction :

The glorious area of Sanskrit literature amazingly covers every single aspect of human life. Take the examples from Vedas, Puranas, and Upanishads are the gems that give society sacred knowledge for human beings to lead a happy life and show the path to attain Purusarthas. Another aspect of Sanskrit literature is to teach human moral ethics, values, code of conduct, and laws through sutras, verses, and compositions. Society and humans of every generation very much need these.

Now imagine a society which has these ideas to follow but does not find any suitable place or guidelines or system to implement, there needs to be a system and law to make sure to balance the society. So here, the concept of Dharmasastra was born from the ideas of ancient sages to balance the rules, laws of the society to make it liveable.

Definition of Dharmasastra :

Dharmasastra term itself reflects the foundation of the cohabitation of social laws and values in human lives. It is formed by two words that are Dharma and Sastra.

The definition of “Dharma” gives a wide range of meanings in different contexts. The grammatical explanation of the word Dharma in Sanskrit is धरति लोकान् ध्रियते पुण्यात्माभिः इति वा. It means

Yama Represents Universal Brotherhood in YOGA

Dr. Prasanta Kumar Sethi*

अयं निजः परो वेति गणना लघुचेतसाम्।
उदारचरितानां तु वसुधैव कुटुम्बकम्॥

Universal Brotherhood means the whole world is your brother and there is no difference in religion, caste and other factors. In Sanskrit, it is वसुधैव कुटुम्बकम्, which means that the whole world is one family. The concept of वसुधैव कुटुम्बकम्, originates from हितोपदेशः of Narayana Pandita, the main purpose of this text is not only to instruct the young through various stories but also it suggests universal brotherhood.

The word Universal Brotherhood is found in almost every scripts in Sanskrit text. Bhagabad Gita talks about friendship and equality. In 9th chapter of sloka no 29th it is said

समोऽहं सर्वभूतेषु न मे द्वेषोऽस्ति न प्रियः।
ये भजन्ति तु मां भक्त्या मयि ते तेषु चाप्यहम्॥^१

I am the same to all creation. I have neither enemy nor friend. But those who worship me with devotion are in me and I am also in them. Rg Veda also states the brotherhood like, अज्येष्ठामो अकनिष्ठासः संभ्रातरो वावृधुः सौभगाय?^२ It means that all human beings are brothers. None of them is elder or younger. All are equal and they are growing for prosperity having brotherly attitude. Like Bhagvad Gita, Veda and other scripts, Yoga also states the message of Universal Brotherhood. This paper will highlight some points of

Abstract: *The rapid growth and developments in technologies over the last few decades have significantly influenced the functioning of libraries. The result is evident in the transformation of traditional libraries into electronic and digital libraries. In an academic setup for the dissemination of information and establishment of a strong network of systems, library automation is immensely important. Thus, for effective management of the growing number of information resources (like print and electronic) as well as the increase in users who seek a variety of information necessitates for an automated library. Although, the concept of 'library automation' is not new in the state of Odisha, still, it is a major topic of discussion. Hence, this paper looks into the matter of library automation in higher educational institutions in Odisha and sketches the growth and development of higher education institutions as well as depicts to what extent higher educational institution libraries are automated in Odisha. It also highlights the type of software used for library automation and availability of OPAC/Web OPAC system in the libraries.*

Indian Culture and Heritage

Dr. Sanjukta Padhi

Abstract

India is a country that boasts of a rich culture. The culture of India refers to a set of minor unique cultures. The culture of India comprises of clothing, festivals, languages, religions, music, dance, architecture, food, and art in India. Most noteworthy, Indian culture has been influenced by several foreign cultures throughout its history. Also, the history of India's culture is several millennia old. Indian culture is really an outcome of continuous synthesis and has absorbed many external influences within the course of long journey of history. The first stirring of civilization occurred amongst the people of India some 4,000 years before the birth of Christ. From those past till recent past, we were exposed to unbroken sequence of civilizations. It is only the dynamism and the flexibility of Indian culture that enabled it to survive these foreign invasions and retain its originality and traditional character even after imbibing the best of those external influences. Indian people, naturally tolerant and fatalists, didn't at any time ridicule the traditions of foreign civilizations. On the opposite hand, Indian mind has assimilated much of the thinking of the opposite cultures, thus enriching it and thereby becoming unique in its character.

Mental Health Issues During And After Covid-19 Pandemic: A Micro-Level Enquiry

□ *Dr. Sanjukta Padhi*
Dr. Kishore Kumar Biswal

Introduction

The COVID-19 Pandemic or the Coronavirus disease 2019 has been profoundly affecting people's psycho-social and economic life of affecting countries in particular and around the globe in general. It has brought about a complete change in our psychological environment due to lockdown, shutdown, social distancing and restriction on our physical mobility. This is a significant threat to our mental health. People from all sections of society, irrespective of their socio-economic status and age group, are not free from mental agony due to this pandemic situation. There are numerous mental health threats associated with the current pandemic and subsequent restrictions. This pandemic has led to reorganizing our lifestyles at the home, office, and marketplace, everywhere. The widespread causes of a mental health crisis or psychological stress during this pandemic are fear of being infected by the virus, fear of losing a job or employment, fear of losing livelihood, fear of being socially excluded, feeling of helplessness, loneliness, boredom etc. Therefore, coping with the mental health issues associated with the COVID-19 pandemic as the coronavirus pandemic rapidly sweeps across the planet is the most critical challenge before we are. At this juncture, people across the globe are experiencing a kind of psychological crisis because of fear, anxiety, worry, distress concern, and stress factors, which

DR. AURORA MARTIN

Dr. Aurora Martin is Vice president of the International Institute for Human Security headquartered in Chicago, Dean of Faculty of Foreign Languages and Literatures, Dimitrie Cantemir Christian University, Senior advisor in the National Agency for Equal Opportunities between Women and Men and President of Romania-India Business Council, Women's Indian Chamber of Commerce and Industry (WICCI).

She is an anti-discrimination and gender expert within the Romanian Government and Parliament. She has been coordinator of the Department of Peace Operations, Peace Action,

Training and Research Institute of Romania, president of the Euro-Atlantic Partnership for Sustainable Development, editor-in-chief and editor at the Policy Sphere, Res Publica, Journal of Equal Opportunities and Pro-Diversity. She is a mentor in the Telemachus Global Thinkers program (UK). As a scholarship holder of the US State Department (Professional Fellow program) she initiated the Mobile Museum of Modern Slavery in Romania. She has been a visiting professor at Wilmington College, Ohio; Russian Presidential Academy of Economics and Public Administration, Saint Petersburg; University of Belgrade; Roma Tre University; Lomonosov State University Moscow; Khazar University, Baku; European Center for Security Studies George C. Marshall Germany (where she graduated with two researches focused on Human Security and Responsibility to Protect).

In 2015, she was nominated the Woman of the Year in Romania for defending and promoting women's rights. She received awards for the protection and promotion of women's rights: Woman of Excellence for International Dissemination of Feminist Political Culture from the Académie Internationale Mihai Eminescu, the Women of the Decade in Security and Conflict Transformation (2018), and the Iconic Women Creating a Better World for All (2020) from the Women Economic Forum, and Award of Excellence and Recognition from the Egyptian Government (2020).

She published "Italian language for Political Science"; "Women Identity Representation in the Romanian Culture"; "Lingue diverse per scopi diversi: linguaggi specialistici e settoriali"; "L'italiano per modi di dire. Campi semantici di riferimento: Il corpo umano"; "Quaderno operativo di linguaggi specialistici e settoriali". "Eserciziario d'italiano per modi di dire: Il corpo umano"; WomanScape.com celebrated her on January 2019.

DR. NANDINI BASISTHA

Dr. Nandini Basistha is working as Assistant Professor at Amity Institute of Liberal Arts, Amity University, Mumbai. She is also Executive Director (Honorary) of Interdisciplinary Institute of Human Security & Governance, Delhi. Previously, she was ICSSR Post-Doctoral Fellow at Centre for North East Study and Policy Research, Jamia Millia Islamia; Assistant Professor of South Asian Studies, Kurukshetra University; Senior Fellow at Institute of Foreign Policy Studies, Calcutta University; and UGC-SRF and UGC-JRF at Rajiv Gandhi Chair in Contemporary Studies, University of Allahabad. She authored Politics of Separatism (New Delhi: Vaibhav Publications, 2018); edited Women's Rights & Justice: Theory & Praxis (New Delhi: Mittal Publications, 2021); Women Empowerment & Welfare: Recent Issues & Trends (New Delhi: Mittal Publications, 2021); co-edited Changing Dimensions of Social Justice in New Global Era (New Delhi: Pentagon Press, 2012) and published research articles in 30 internationally-reputed journals and books in English, Bengali, Portuguese etc. She has presented papers at 45 seminars in India, United Kingdom, and Singapore. She is Editorial Board Member of International Journal of Bio Sciences and Technology (IJBST), non-profit peer-reviewed open access International Journal. She has expertise in South Asian Studies, Identity Politics, Gender Studies, and International Relations.

ABSTRACT

Cybersecurity is of global importance. Nearly all association suffer from an active cyber-attack. However, there is a lack of making cyber policy violator more resilient for analysis in proportionately analyzing security incidents. Now the question: Is there any proper technique of implementations for assisting automated decision to the analyst using a comparison study feature selection method? The authors take multi-criteria decision-making methods for comparison. Here the authors use CICDDoS2019 datasets consisting of Windows benign and the most vanguard for shared bouts. Hill-climbing algorithm may be incorporated to select best features. The time-based pragmatic data can be extracted from the mainsheet for classification as distributed cyber-policy violator or legitimate benign using decision tree (DT) with analytical hierarchy process (AHP) (DT-AHP), support vector machine (SVM) with technique for order of preference by similarity to ideal solution (SVM-TOPSIS) and mixed model of k-nearest neighbor (KNN AHP-TOPSIS) algorithms.

CHAPTER 24

PREDICTIVE ANALYSIS ON REAL-TIME MEDICAL DIAGNOSIS OF BRAIN TUMOR USING MACHINE LEARNING

Dillip Narayan Sahu & Madhumita Panda

ABSTRACT

Artificial intelligence is broad field branch in computer science, in manufacturing smart machines those will have human like intelligence or perform human like actions. In medical sciences, Artificial Intelligence can be used as a tool for getting data of a patient's health condition and by analysing those data they can diagnose the disease very efficiently and accurately. As per the statistical data, more than 2600 Indian children has been suffer from the disease Brain Cancer every year, which is the most common cancer among kids in India. Because of an abnormal cell generated at any part of the brain, it is very difficult for the medical sciences to predict and identify efficiently for the cancerous disease in the brain and also the stage. In this chapter, we have shown a clear picture on the predictive analysis on medical diagnosis of the disease Brain Tumor using Machine Learning algorithms using which patients may get accurate data so as to diagnose better for their early treatment.

Keywords- Algorithm, Classifier, Machine Learning, Tumor, Weka.

Abstract:

The Internet of Spatial Things (IoST), continuously generates a large volume of geospatial data from a large number of connected smart devices. Cloud computing is inefficient to respond to IoST because of latency concern. Fog computing allows geospatial data processing as well as geospatial storage close to IoST devices and addresses this concern. This fog computing-based GIS model i.e. FogGIS is assisting to the cloud for invoking various geospatial web services. In many scenarios the service requests arrive to the fog layer and waits in a queue due to the current workload of fog servers. When all the Virtual Machines (VMs) are congested (busy), the arrived tasks are queued in the fog buffer until the fog servers becomes available to process the service. This creates the possibilities of task renegeing or dropping. Renegeed or dropped tasks could be resubmitted if the tasks were not dropped due to security reasons. In this paper, it experiments the performance of the fog layer based on the task arrival and the buffer size of the system using M/M/c/N Queuing theory. It also offers numerical illustrations to demonstrate the application of task renegeing and feedback on the parameters such as queuing delay, probability of immediate service as well as probability of task rejection.

Contents

I. Introduction

Fog computing is one of the new computing paradigms which delivers as an assisted technology for cloud computing [1]. This technology can play a key role for handling large amount of geospatial data in geospatial cloud computing environments. Fog nodes are handled efficient for storing and analysis of geospatial big data by the help of Internet of Spatial Things (IoST) [2][3]. The fog computing handles the large amount of work in the data centers over network particularly geospatial cloud environment. Geospatial Data are reproduced at several sites of the networks due to the interaction between mist and IoST [4][7]. The support of geospatial data recoveries is carried out by the various geospatial cloud providers [5]. In geospatial cloud computing environment, it can deliver various geospatial web services for geospatial data storage, analysis, and visualization. In client tier layer, various users have sent the different tasks to the cloud layer for accessing or retrieving the geospatial web services via fog layer [6]. When a task waits in the queue more than its timeout time or deadline, the task is reneged or dropped or the queue is full. If the tasks are not reneged because of security reasons, it may be resubmitted. Reneging is the dropping of the tasks if the queue is full and if the task is resubmitted again after dropping, it is termed as feedback [8][9][11]. Task reneging has been examined in [13] using Markovian model in cloud computing without resubmission.
